Personal Portfolio Website with Cybersecurity Awareness Module

A modern and responsive personal portfolio website developed using HTML and CSS. The project showcases personal information, technical skills and professional abilities through a clean dark-themed interface.

It also includes a Cybersecurity Awareness Module that provides important online safety tips such as password safety, phishing awareness, safe browsing and OTP scam protection.

The website is designed with these goals:

1. Showcase my identity as an Aspiring Software Developer.
2. Present my skills in a structured and visual format.
3. Keep the design attractive, responsive, and user-friendly.
4. Make the project deployment-safe for platforms like Vercel.
5. Educate visitors about practical cybersecurity habits.

Problem Statement

Many beginner portfolio websites focus only on basic personal information and simple design layouts. They often lack modern UI design, responsiveness and informative content. Students also have limited awareness about cyber safety and online security practices. This project solves these problems by creating a modern and responsive portfolio website that not only showcases technical and professional skills but also spreads cybersecurity awareness through informative safety tips and guidance.

Objective

1. To design and develop a professional, responsive portfolio website.
2. To present technical skills clearly, including HTML, CSS, Python, and SQL.
3. To implement clean multi-page navigation and mobile-friendly interactions.
4. To include a dedicated educational section on cybersecurity awareness.

Technology Stack

- HTML5 – Used for creating the structure and content of the website.
- CSS3 – Used for styling, layouts, animations and responsive design.
- Google Fonts – Used for modern and attractive typography.
- Flexbox & Grid – Used for responsive alignment and page layouts.
- GitHub – Used for website deployment and hosting.

Design System

The website follows a modern dark-themed design system with a clean and responsive user interface. Consistent typography, spacing, colors and layouts are maintained across all pages to create a professional look. The design uses Flexbox and Grid layouts for proper alignment and responsiveness on different screen sizes. Interactive hover effects, cards and structured sections are used to improve user experience and visual appeal.

Home Page

The Home page is the primary introduction screen and includes:

1. The home page has basic introduction of candidate and briefly describe about their skills and projects that they have done in their college life.
2. The page includes a hero section with a large heading, professional introduction, skills showcase and extra skills section.
3. It is designed to create a strong first impression with responsive layouts, interactive cards and clean UI styling.

About us page

This page gives detailed information about professional direction and work approach:

1. Personal introduction and role statement.
2. Focused learning and development goals.
3. Skills snapshot in compact visual form.
4. Direct contact highlights.
5. Additional focus-area content for consistency.

ABOUT ME

Turning Ideas Into Creative Reality

I am a passionate BCA student who enjoys designing modern websites and learning new technologies.

I love creating visually attractive and responsive user interfaces with clean layouts and smooth experiences.

Along with Web Development, I am also interested in Artificial Intelligence, Machine Learning and creative digital design.

Contact Us Page

This page is structured for reliable communication:

- 1. Introductory contact message.
- 2. Static contact details section.
- 3. No form submission API or email backend integration.

This decision improves deployment reliability and prevents production failures on serverless hosting.

Cyber Secuti y Awareness

Cyber Security Awareness is one of the most important sections of this portfolio website. The purpose of adding this module is to educate students and internet users about common online threats and safe digital practices. Nowadays, people use social media, online banking, emails and digital platforms every day, which increases the risk of cyber attacks, scams and data theft.

This section provides useful information about password safety, phishing awareness, safe browsing, social media privacy and OTP scam prevention. The content is written in a simple and understandable format so that students from all backgrounds can easily learn basic cyber safety habits.

The cybersecurity module not only improves the informational value of the portfolio but also shows awareness about digital security and responsible internet usage. It reflects the importance of staying safe online while using modern technology and digital platforms.

App Development Idea

App name: CareSync

Purpose:

CareSync is a smart healthcare application designed to help users manage their health, medical records and daily wellness activities in one place. The app aims to make healthcare more accessible, organized and user-friendly.

Target users:

- Students
- Working professionals
- Elderly people
- Patients managing regular medications or health checkups

3 main features:

1. Medicine Reminder System

The app sends reminders for medicines, water intake and doctor appointments to help users maintain a healthy routine.

2. Digital Health Records

Users can securely store prescriptions, medical reports and health history digitally for easy access anytime.

3. AI Health Assistant

An in-app assistant provides basic health guidance, symptom tracking and wellness tips for daily healthcare awareness.

Thank You

Conclusion,

This project successfully delivers a modern, responsive, and assignment-ready personal portfolio website for Harshita Gulwani. It reflects frontend development capabilities, clean design practices, and deployment awareness.

The inclusion of a student-focused cybersecurity awareness page adds depth and real-world relevance, making the project both technically sound and socially meaningful
